

LOOM SECURITY SERVICES | FROM CHAOS TO CLARITY

Powered by the Loom Lens Approach

Our persona-driven methodology, powered by the Loom Lens approach, aligns security to how people work, not just where threats appear. By bringing contextual intelligence across five control points—**Identity, Device, Network, Application, and Data**—we deliver precise, actionable outcomes tailored to business personas and aligned with organizational goals.

LOOM LENS PERSONA | ADVISORY SERVICES

Loom's Advisory Services align security programs with business goals through persona development, Zero Trust frameworks, and strategic planning for identity, network, application, and data security.

Persona Development/Evaluation

Define the critical personas that drive both your business development and highest risk to better align security posture.

SPM Program and Tool Strategy

Align and build security programs that provide robust Security Posture Management across control points with the right platforms.

Persona Focused Security Planning

Plan security controls that both support and protect your business users in their context.

Zero Trust Program Baseline

Solid identity and connectivity management is foundational to your security program and your Zero Trust journey, ensure it's done right.

LOOM LENS CONNECT | PROFESSIONAL SERVICES

Loom's Professional Services implement tailored security solutions across the five control points to enhance visibility, efficiency, and security alignment.

xSPM Implementation and Operationalization

Design, implement, and operationalize xSPM platforms in manageable ways that support your program initiatives.

Microsegmentation Implementation

Transition your network to isolate resources in support of ZT initiatives -- but keep end users and business outcomes top of mind!

Zero Trust Controls Implementation

Full implementation services around the spectrum of ZT controls including IAM, Network, Application, Data control planes.

IAM Program Implementation/Enhancement

Foundational implementation of identity platforms and programs to meet modern requirements across the IAM spectrum.

LOOM LENS SECURE | MANAGED SERVICES

Loom's Managed Services provide expert security management, including Zero Trust management powered by Cato Networks, managed SPM platforms, and fully managed identity and persona services.

Loom Zero Trust Connect (ZTC) & Zero Trust Secure (ZTS) – powered by Cato
Core ZT Management offerings plus enhanced security controls powered by Cato Networks. Fully managed connectivity focused on personas to secure your business.

Managed Platform Services

Complete management and integration of your SPM platforms to bring value to the business while ensuring robust security practices.

Unified Security Posture Management

Visibility across the five control points to better secure the organization and proactively manage risks.

LOOM LENS SECURE | MANAGED SERVICES

Loom Labs is a fully independent and isolated environment that represents a traditional hybrid enterprise ecosystem. Experience integrated platforms in action, not in a sterile, siloed space.

The Loom Labs environment is a full lab ecosystem that exists to support product demonstrations, POCs, discovery, and security process improvements. We offer this environment to allow clients to showcase modern security principles and processes alongside a variety of tools to meet various needs.
